

ADVANCED

NINETY-DAY PROTOCOL

You already train and you already do some of this. This closes the gaps and measures what you have been doing on faith.

Trillions of batteries, keeping time together

Your body is not one battery. It is a coordinated network of trillions of cellular batteries. Every cell holds a voltage across a membrane, and different tissues are built to hold different voltages. A neuron, a muscle cell and an immune cell are supposed to be different. The goal is the voltage appropriate to each tissue, never the maximum.

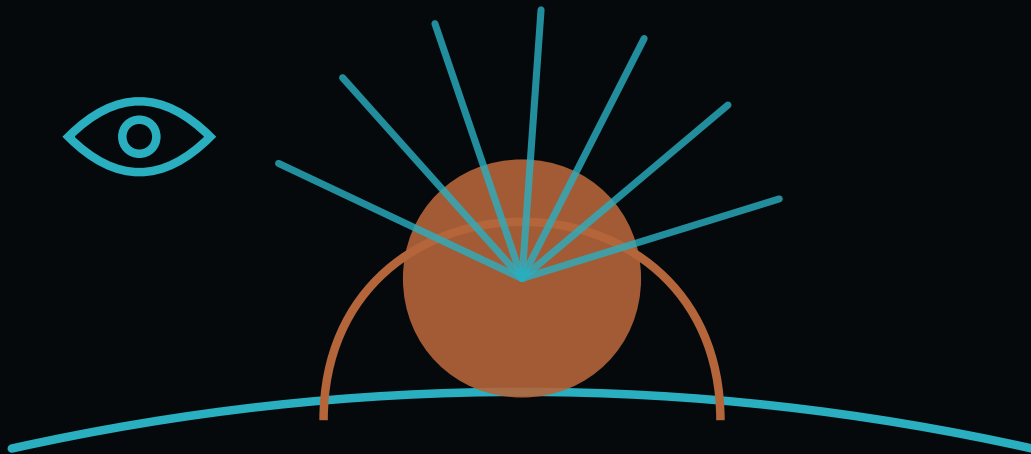

Coherence is the ability of cells to hold their proper electrical identity while coordinating their voltage, metabolism, timing and behaviour with the tissue around them and with the whole organism. A cell can be individually healthy and still be out of step with its neighbours. That is what the ninety days are for.

Light is how the timing gets set. Morning light tells the body what hour it is, and that signal synchronises the nervous system, hormones, metabolism and mitochondrial activity. It does not deliver energy into you. Food in season tells it what month it is.

The circadian protocol is how coherence is supported. The daily log is how it is tracked. Every element in this document carries a note saying which of the four questions it answers, and where an element answers none of them, it says so.

Circadian protocol

Everything in this program depends on this section. If you do nothing else in the first two weeks, do this.

LIGHT SETS THE CLOCK

1

Circadian protocol

ADVANCED

Everything in this program depends on this section. If you do nothing else in the first two weeks, do this.

Your body runs on a clock, and the clock is set by light. Morning light tells every cell what time it is. Darkness at night lets the repair cycle run. When the clock is right, food is handled correctly, hormones release on schedule, and sleep does its job. When the clock is wrong, nothing downstream works, no matter how well you eat or train.

The sequence, every day:

LIGHT → WATER → MOVEMENT → FOOD → MOVEMENT → LIGHT → DARKNESS

Go outside as soon as you wake up

What to do: Outside within 30 minutes of waking. Twenty minutes on a clear day, forty when cloudy. Face east. Barefoot on the ground the whole time. No sunglasses, no window.

Why: Your body has a clock inside it. The clock does not know what time it is until it sees the sun. When morning light hits your eyes, it tells every cell in your body that the day has started. That one signal sets up your energy, your hunger, your hormones and your sleep for the whole day. If you skip it, your body runs on the wrong time all day, like a clock that was never set.

| **Answers Q3, Q4.** Sets the circadian clock every tissue runs on. Sleep timing and light exposure are logged daily.

Get sun on your skin in the afternoon

What to do: Fifteen to thirty minutes of sun on your arms and torso around noon. Fair skin starts at ten minutes and builds up.

Why: Morning light sets your clock. Midday sun holds it there. It is also the only time of day your skin can make vitamin D, and sun on bare skin widens your blood vessels, which lowers blood pressure. We measure both at day 0 and day 90.

| **Answers Q3, Q4.** Holds the clock set. Vitamin D is on the panel and blood pressure is measured at both ends.

Watch the sun go down

What to do: Outside for the last fifteen minutes of light.

Why: The light at sunset is red and orange. That color tells your body the day is ending and it is time to start making melatonin, the hormone that makes you sleepy. Seeing the sunset is how your body knows to begin winding down. Skip it and your body does not get the message, and then you are wide awake at midnight wondering why.

| **Answers Q3.** Red light starts melatonin onset, the handover from day signalling to night signalling.

Put on your glasses when the sun goes down

What to do: Amber or red lenses from sunset. Incandescent or red bulbs in every room you use after dark. Screens filtered with Iris and a blue-blocking film.

Why: After sunset, your body expects darkness. Light bulbs and screens give off a blue light that looks like daytime to your brain. Your brain sees it and stops making melatonin, and that is why you cannot fall asleep even when you are tired. Amber or red glasses block the blue. So do warm bulbs and screen filters. It is not about the brightness. It is about the color.

| **Answers Q3.** Protects that melatonin signal from blue light that would tell the body it is still daytime.

Make the bedroom dark and quiet

What to do: Phone in airplane mode and out of the bedroom. Router off at the wall. Blackout curtains. Grounding sheet. Room at 65°F.

Why: Your body does its repair work while you sleep, and it can only do it in the dark. Even a small light, like a phone screen or a charger glow, can be enough to keep the repair from starting. The phone also keeps your brain on alert, waiting for a buzz. Out of the room means your body can finally switch off.

| **Answers Q3, Q4.** Darkness is when repair signalling runs. Sleep timing and regularity are logged daily.

Stand barefoot on the ground

What to do: Twenty minutes barefoot every morning with the light block. Grounding sheet at night.

Why: The earth carries a natural electric charge. When your bare skin touches grass, soil or sand, your body connects to it. Shoes with rubber soles block that connection, and most people go weeks without ever touching the ground. We stack this with the morning light so it is one habit, not two. You are outside anyway. Take your shoes off.

| **Answers none of the four questions.** No mechanism in the foundational model, nothing on the panel, nothing in the daily log.

Give your body hours with no food

What to do: Eating window 7am to 3pm. That is a 16-hour fast every night. One 24-hour fast every two weeks on a non-lifting day.

Why: Every time you eat, your body has to stop what it is doing and deal with the food. If you eat from the minute you wake up until right before bed, your body never gets a break to do repairs. Hours without food, especially overnight, is when the cleanup happens. Late eating is the worst, because your body is trying to wind down and you just handed it a job.

| **Answers Q1, Q4.** Metabolic flexibility and substrate switching. Fasting glucose, insulin and HbA1c are on the panel.

| **The rule that matters most:** light before food, every single day. Do not eat until you have been outside.

Water and minerals

The morning glass first. Then three liters, every bottle with minerals in it.

MINERALS, LEMON, SALT

Water and minerals

ADVANCED

The morning glass

Before coffee, before food, before anything: 16 to 24 oz of mineral water with a pinch of Baja Gold sea salt and 1 to 2 oz of pure organic lemon juice. Empty stomach. It is the first thing the body receives after light.

Through the day

Three liters minimum, four on sauna and training days. Every bottle gets a pinch of Baja Gold, because water without minerals passes through and takes minerals with it. Most of it before your last meal.

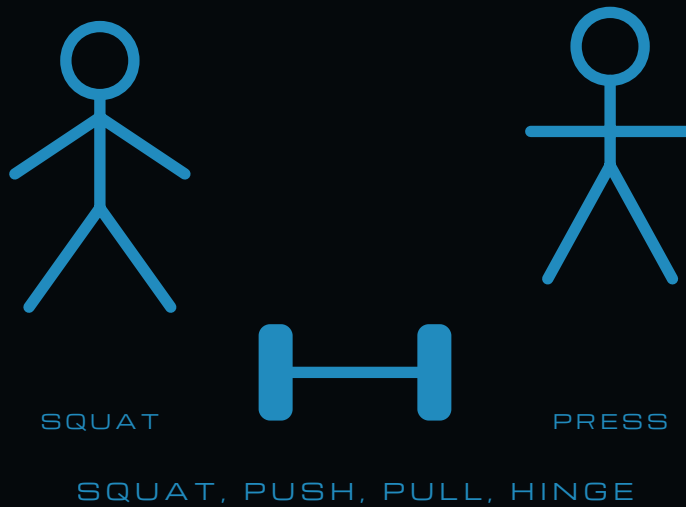

What to drink

Crazy Water #4, Saratoga or Icelandic Glacial as bottled water. At home, reverse osmosis with Baja Gold added, a quarter teaspoon per liter. Baja Gold for cooking. Nothing else.

| **Answers Q2, Q4.** Minerals are the ions the pumps move. Sodium, potassium and RBC magnesium are on the panel.

Movement

Four patterns. Walks after every meal. Zone 2 for the mitochondria, intervals for the ceiling.

Movement

ADVANCED

Resistance, four days

Day A: pistol or weighted squats, weighted dips, pull-ups, Nordic curls. **Day B:** single-leg deadlift, handstand push-up progression, rows, farmer carries. Days C and D repeat A and B with more volume. Five sets of five to eight. Add load when you clear eight on every set.

Zone 2, three sessions of 60 minutes

Heart rate at 180 minus your age. Conversational pace.

Intervals, twice a week, never consecutive

Norwegian 4×4. Hill sprints, assault bike or rowing.

Walking

Ten to fifteen minutes after every meal, within twenty minutes of finishing. Ten thousand steps.

Grip

Dead hangs, three sets to failure, three times a week.

| **Answers Q1, Q4.** Builds mitochondrial number and respiratory capacity. VO2max, lactate and grip strength are measured at both ends.

Food

Protein first, fat for fuel, inside a window that closes early. The full list is in the Dietary Guidelines.

PROTEIN, FAT, THEN CARBS

Food

ADVANCED

Window: 7am to 3pm

Two meals. No snacks. Nothing after 3pm but water and tea.

First meal

A full tin of sardines in olive oil, or three pastured eggs in butter. A full bowl of leafy greens. A serving of fermented vegetable. Olive oil over everything.

Second meal, by 3pm

Grass-fed beef, wild salmon or lamb, 8 to 10 oz. Two cups cruciferous vegetables. Avocado or olive oil. Sea salt.

Every day

Sardines or wild salmon. Leafy greens. One fermented food. Eggs four times a week minimum. Liver once a week.

Protein

2 grams per kilogram, every day.

Out for 90 days

Gluten, all seed oils, added sugar, alcohol, nightshades, legumes, grains. Dairy limited to grass-fed butter and aged cheese.

Answers Q1, Q2, Q4. Fuel handling, plus the fatty acids and protein the membranes are built from. Glucose, insulin, HbA1c, Omega-3 Index and albumin are on the panel.

The full approved food list, the daily non-negotiables and how to build a plate are in the Dietary Guidelines document.

Heat and cold

Stress that builds capacity. Dosed to your tier, timed away from your lifts.

HEAT

COLD

STRESS THAT BUILDS CAPACITY

Heat and cold

ADVANCED

Sauna, five to seven days

Traditional sauna at 175 to 195°F, twenty minutes. Two rounds if you have time. Rehydrate with mineral water and Baja Gold.

Cold, four days

Three to five minutes at 50°F or below.

Contrast, one designated day

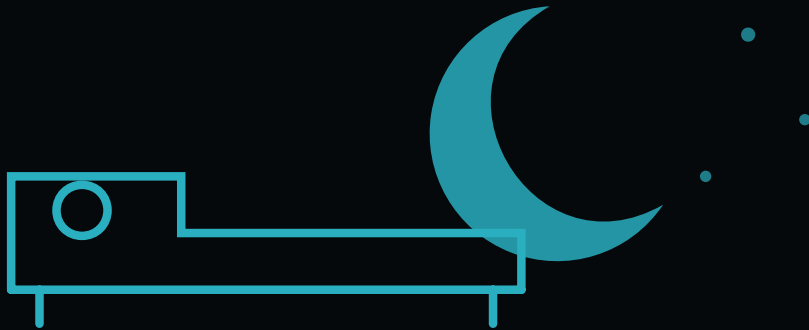

Sauna then cold, three rounds.

Cold goes after zone 2, never after resistance training. If you lift in the morning, cold is in the evening or on a non-lifting day.

Answers Q1. Controlled stress that builds mitochondrial capacity. Nothing on our panel isolates it.

Sleep

Same time, every night. Dark, cool, nothing plugged in.

DARK, COOL, SAME TIME

Sleep

ADVANCED

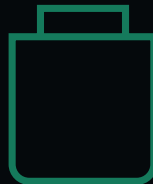

Same bedtime, same wake time, seven days a week. Room cool and completely dark. Last food three hours before bed. Phone out of the bedroom.

Room at 65°F. Grounding sheet. Nasal breathing. If you snore, mouth tape.

| **Answers Q3, Q4.** Recovery is when gradients are rebuilt and membranes repaired. Sleep timing and regularity are logged daily.

Supplements

Dosed to your labs, not to a label. No commission on any of it.

DOSED TO YOUR LABS

Supplements

ADVANCED

Morning, with the first meal

Pure Encapsulations O.N.E. Multivitamin, 1. EPA/DHA Essentials, dosed to your Omega-3 Index: under 4% take 2,000 mg, 4 to 6% take 1,500 mg, over 6% take 1,000 mg. Vitamin D3/K2 liquid, 5,000 IU, adjusted after labs. Creatine, 5 g. Dragon Herbs Super Adaptogen, 3. Spirulina powder (Nutrex Hawaii), 1 tablespoon. Cowboy Colostrum, 1 scoop on waking before anything.

Midday

Dragon Herbs Duanwood Reishi, 2. Gaia Turmeric Supreme, 1. Quicksilver Liposomal Glutathione, 1 pump.

Afternoon, empty stomach

Dragon Herbs Spring Dragon Longevity Tea. Vital Proteins Collagen, 20 g in the tea with lemon.

Evening, two hours before bed

Chlorella powder (Sun Chlorella), 1 tablespoon, alone. Magnesium Glycinate, 400 mg. Glycine, 3 g. Gaia Nighttime HPA, 2. Dragon Herbs Lights Out as needed.

Three mornings a week

Dragon Herbs Tonic Alchemy, 1 scoop, in place of the multivitamin.

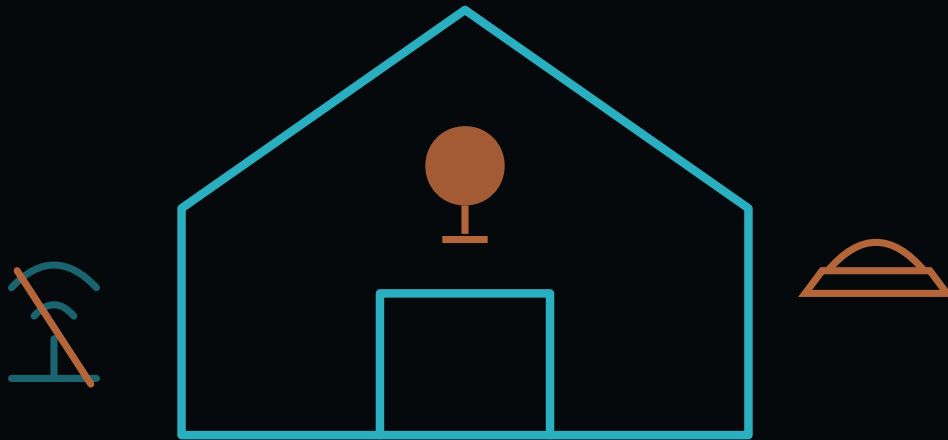

If you are training hard and still tired: the Jing stack, 30 days

Super Adaptogen 3 morning and 3 midday. He Shou Wu, 3 morning. Cordyceps, 2 pre-training. Deer Antler Drops, 1 dropper morning, 21 on 7 off. Gaia Daytime HPA, 2 morning and 2 afternoon. Then back to the base stack.

Answers Q2, Q4. Substrate for membranes and enzymes. Omega-3 Index, 25-OH vitamin D, RBC magnesium, B12 and ferritin are on the panel.

Equipment and sourcing

Glasses, bulbs, a router timer, water, and where to get each one.

RED LIGHT, ROUTER OFF, GLASSES ON

Equipment and sourcing

ADVANCED

Dr. Pittman takes no commission on anything listed here. These are what he uses.

Evening glasses	Ra Optics Sunset (amber) or Night Shift (red). BLUblox Sleep+. TrueDark Twilight. They must block 460 to 490 nm. Ask for the transmission spectrum.
Screens	Iris (iristech.co) on every computer, Health mode after sunset. f.lux is the free alternative. BlockBlueLight or Ocushield film on monitors. BlockBlueLight filter on the TV.
Bulbs	Incandescent wherever you can find them. Otherwise BlockBlueLight or Bon Charge red bulbs for evening rooms.
Router	Mechanical outlet timer, off 10pm to 6am. About twelve dollars.
Grounding	Earthing.com or Hooga sheet for the bed, mat for the desk. Test your outlet with a three-dollar tester first.
Water	Crazy Water #4, Saratoga, Icelandic Glacial. APEC or iSpring under-sink RO at home. Baja Gold sea salt.
Sauna	Gym sauna for most. Sun Home or Almost Heaven barrel for a home unit. Traditional, not infrared.
Cold	Cold shower to start. Ice Barrel or a chest freezer conversion with a GFCI for a home plunge.
Testing	OmegaQuant Omega-3 Index kit, day 0 and day 90. Camry grip dynamometer.

Three phases

Stop the drain. Recharge. Build. Measured at both ends.

MEASURED AT BOTH ENDS

Three phases

ADVANCED

Days 1 to 30	Stop the drain. Sugar, alcohol and seed oils out. Sleep window fixed. Morning light non-negotiable. Log daily.
Days 31 to 60	Recharge. Protein target. Full training schedule. Sauna and cold at full frequency. Window at 7am to 3pm.
Days 61 to 90	Build capacity. Load goes up. First 24-hour fasts. Day 90 draw.

10 / EVERY DAY

Daily checklist

This is what goes in the log. Under a minute.

- | | |
|---|---|
| ☐ Outside within 30 min of waking, 20+ min, barefoot | ☐ Sunset outside |
| ☐ Morning glass | ☐ Sauna or cold |
| ☐ Training or zone 2 | ☐ Amber glasses from sunset |
| ☐ Both meals inside 7am to 3pm | ☐ Three liters of water |
| ☐ Walk after each meal | ☐ Phone out of room, fixed bedtime |
| ☐ Midday sun | ☐ Logged |

What this is, and is not

The Human Battery Project is an educational wellness program, not medical treatment. It does not diagnose or treat any condition and does not replace your physician.

Any laboratory result outside the reference range is referred to a physician. Every time.

If you take prescription medication, review the supplement list and any change to your eating window with your prescriber before starting. Never adjust a medication on your own because of anything in this document.

Stop and seek medical care for chest pain, fainting, shortness of breath at rest, or any new symptom that concerns you.

Never manipulate potassium or other electrolytes to try to change your body's charge. Balance and correction of a genuine deficiency only.

We do not promise outcomes. We measure at both ends and show you exactly what changed.
