

PRO

NINETY-DAY PROTOCOL

You are already doing all of it. This is the full stack, sequenced and measured.

Trillions of batteries, keeping time together

Your body is not one battery. It is a coordinated network of trillions of cellular batteries. Every cell holds a voltage across a membrane, and different tissues are built to hold different voltages. A neuron, a muscle cell and an immune cell are supposed to be different. The goal is the voltage appropriate to each tissue, never the maximum.

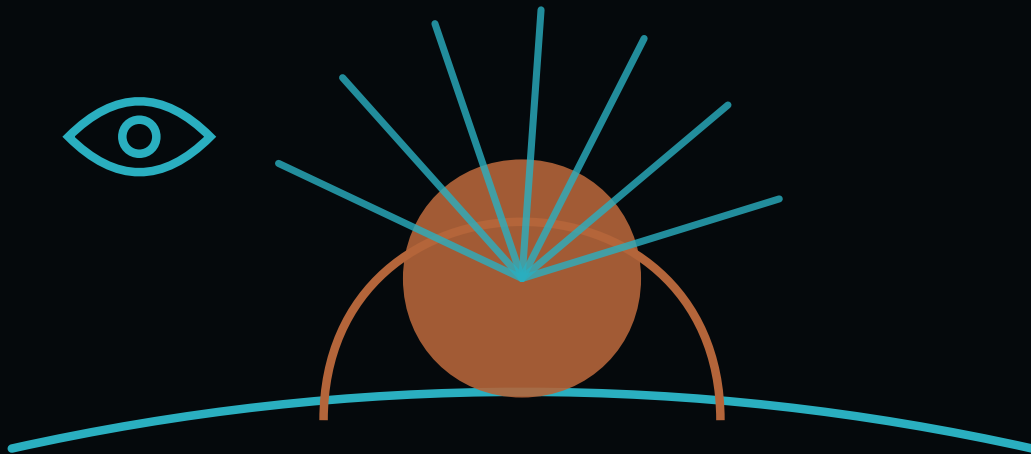

Coherence is the ability of cells to hold their proper electrical identity while coordinating their voltage, metabolism, timing and behaviour with the tissue around them and with the whole organism. A cell can be individually healthy and still be out of step with its neighbours. That is what the ninety days are for.

Light is how the timing gets set. Morning light tells the body what hour it is, and that signal synchronises the nervous system, hormones, metabolism and mitochondrial activity. It does not deliver energy into you. Food in season tells it what month it is.

The circadian protocol is how coherence is supported. The daily log is how it is tracked. Every element in this document carries a note saying which of the four questions it answers, and where an element answers none of them, it says so.

Circadian protocol

Everything in this program depends on this section. If you do nothing else in the first two weeks, do this.

LIGHT SETS THE CLOCK

1

Circadian protocol

PRO

Everything in this program depends on this section. If you do nothing else in the first two weeks, do this.

Your body runs on a clock, and the clock is set by light. Morning light tells every cell what time it is. Darkness at night lets the repair cycle run. When the clock is right, food is handled correctly, hormones release on schedule, and sleep does its job. When the clock is wrong, nothing downstream works, no matter how well you eat or train.

The sequence, every day:

LIGHT → WATER → MOVEMENT → FOOD → MOVEMENT → LIGHT → DARKNESS

Go outside as soon as you wake up

What to do: Outside within 15 minutes of waking, before anything else. Thirty minutes on a clear day, forty-five when it is cloudy. Face east, toward where the sun comes up. Barefoot on grass, dirt or sand the whole time. No sunglasses. No looking through a window. It has to be real outdoor light in your eyes.

Why: Your body has a clock inside it. The clock does not know what time it is until it sees the sun. When morning light hits your eyes, it tells every cell in your body that the day has started. That one signal sets up your energy, your hunger, your hormones and your sleep for the whole day. If you skip it, your body runs on the wrong time all day, like a clock that was never set.

Barefoot if you can. This is part of the morning light block, not separate from it. We include it because it costs nothing, and because standing on grass keeps people outside for the full time when shoes and a doormat do not. We are not measuring it, and we are not claiming it does anything on its own.

| **Answers Q3, Q4.** Sets the circadian clock every tissue runs on. Sleep timing and light exposure are logged daily.

Get sun on your skin in the afternoon

What to do: Twenty to forty minutes of sun on as much skin as you can, around noon. Sized to your skin. Never let yourself burn.

Why: Morning light sets your clock. Midday sun holds it there. It is also the only time of day your skin can make vitamin D, and sun on bare skin widens your blood vessels, which lowers blood pressure. We measure both at day 0 and day 90.

| **Answers Q3, Q4.** Holds the clock set. Vitamin D is on the panel and blood pressure is measured at both ends.

Watch the sun go down

What to do: Outside for the last twenty minutes of light, every day.

Why: The light at sunset is red and orange. That color tells your body the day is ending and it is time to start making melatonin, the hormone that makes you sleepy. Seeing the sunset is how your body knows to begin winding down. Skip it and your body does not get the message, and then you are wide awake at midnight wondering why.

| **Answers Q3.** Red light starts melatonin onset, the handover from day signalling to night signalling.

Put on your glasses when the sun goes down

What to do: Red lenses from sunset, not amber. Every bulb you use after dark is incandescent or a red LED. Screens off after sunset. Candles are the correct evening light.

Why: After sunset, your body expects darkness. Light bulbs and screens give off a blue light that looks like daytime to your brain. Your brain sees it and stops making melatonin, and that is why you cannot fall asleep even when you are tired. Amber or red glasses block the blue. So do warm bulbs and screen filters. It is not about the brightness. It is about the color.

| **Answers Q3.** Protects that melatonin signal from blue light that would tell the body it is still daytime.

Make the bedroom dark and quiet

What to do: Phone off, not airplane mode. Router off at the breaker. Nothing plugged in within six feet of the bed. Grounding sheet. Blackout. Room at 62 to 65°F.

Why: Your body does its repair work while you sleep, and it can only do it in the dark. Even a small light, like a phone screen or a charger glow, can be enough to keep the repair from starting. The phone also keeps your brain on alert, waiting for a buzz. Out of the room means your body can finally switch off.

| **Answers Q3, Q4.** Darkness is when repair signalling runs. Sleep timing and regularity are logged daily.

Give your body hours with no food

What to do: Eating window 7am to 1pm. One 24-hour fast per week on a non-lifting day, water and minerals only. Optional 36-hour fast once a month.

Why: Every time you eat, your body has to stop what it is doing and deal with the food. If you eat from the minute you wake up until right before bed, your body never gets a break to do repairs. Hours without food, especially overnight, is when the cleanup happens. Late eating is the worst, because your body is trying to wind down and you just handed it a job.

| **Answers Q1, Q4.** Metabolic flexibility and substrate switching. Fasting glucose, insulin and HbA1c are on the panel.

The rule that matters most: light before food, every single day. Do not eat until you have been outside.

Water and minerals

The morning glass first. Then three liters, every bottle with minerals in it.

MINERALS, LEMON, SALT

Water and minerals

PRO

The morning glass

Before coffee, before food, before anything: 16 to 24 oz of mineral water with a pinch of Baja Gold sea salt and 1 to 2 oz of pure organic lemon juice. Empty stomach. It is the first thing the body receives after light.

Through the day

Four liters minimum, five on sauna and training days. Every bottle gets a pinch of Baja Gold, because water without minerals passes through and takes minerals with it. Most of it before your last meal.

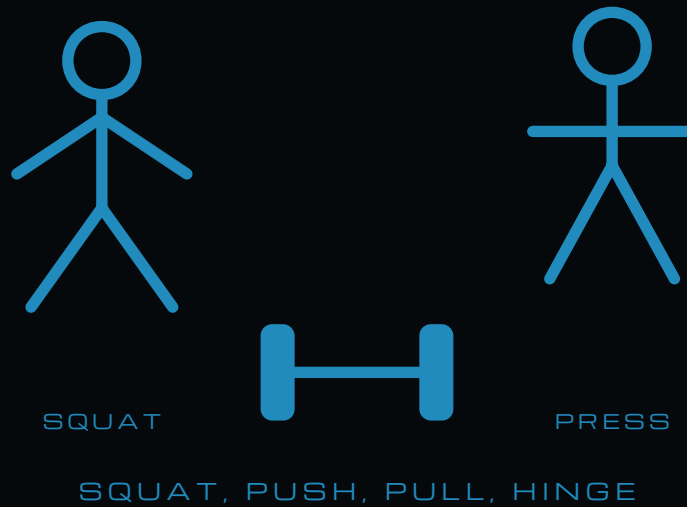

What to drink

Crazy Water #4, Saratoga or Icelandic Glacial as bottled water. At home, reverse osmosis with Baja Gold added, a quarter teaspoon per liter. Baja Gold for cooking. Nothing else.

| **Answers Q2, Q4.** Minerals are the ions the pumps move. Sodium, potassium and RBC magnesium are on the panel.

Movement

Four patterns. Walks after every meal. Zone 2 for the mitochondria, intervals for the ceiling.

Movement

PRO

Resistance, five days

Day A: weighted pistol squats, weighted pull-ups, weighted dips, Nordic curls. **Day B:** deadlift, handstand push-ups, weighted rows, farmer carries. **Day C:** front squat, ring muscle-ups, ring dips, single-leg RDL. **Day D:** A heavier. **Day E:** B heavier. Five sets of three to six on the main lifts.

Zone 2, four sessions of 60 to 90 minutes

Heart rate at 180 minus your age. Fasted. This is where mitochondria are built and it is non-negotiable.

Intervals, three sessions, never consecutive

Norwegian 4×4 twice a week: four minutes at 90 percent, three minutes easy, four rounds. One session of ten 30-second sprints with 90 seconds rest.

Walking

Fifteen minutes after every meal. Twelve thousand steps.

Grip

Dead hangs to failure daily. Farmer carries three times a week.

| **Answers Q1, Q4.** Builds mitochondrial number and respiratory capacity. VO2max, lactate and grip strength are measured at both ends.

Food

Protein first, fat for fuel, inside a window that closes early. The full list is in the Dietary Guidelines.

PROTEIN, FAT, THEN CARBS

Food

PRO

Window: 7am to 1pm

One large meal or two. One 24-hour fast per week.

The meal

Two tins of sardines or 8 oz wild salmon, every day. Grass-fed beef, lamb or liver, 10 to 12 oz. Four pastured eggs. Two cups leafy greens, two cups cruciferous. A fermented vegetable. Extra virgin olive oil, grass-fed butter or tallow. Baja Gold.

Protein

2.2 grams per kilogram of bodyweight, every day, inside the window.

Out for 90 days

Gluten, all grains, all legumes, all nightshades, seed oils, sugar, alcohol, all dairy except butter and ghee. Nothing processed. Nothing in a package with more than one ingredient.

Answers Q1, Q2, Q4. Fuel handling, plus the fatty acids and protein the membranes are built from. Glucose, insulin, HbA1c, Omega-3 Index and albumin are on the panel.

The full approved food list, the daily non-negotiables and how to build a plate are in the Dietary Guidelines document.

Heat and cold

Stress that builds capacity. Dosed to your tier, timed away from your lifts.

HEAT

COLD

STRESS THAT BUILDS CAPACITY

Heat and cold

PRO

Cold, every morning after light

Five to eight minutes at 45°F or below. Then the day starts.

Sauna, every day

Two rounds of twenty minutes at 185 to 200°F. Rehydrate with Baja Gold water between rounds.

Contrast, three times a week

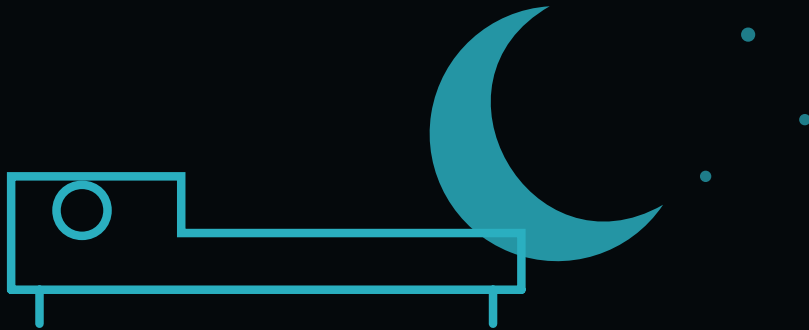

Twenty hot, four cold, three rounds.

Cold never within four hours after resistance training. Morning cold then a lift is fine. Lift then cold is not.

Answers Q1. Controlled stress that builds mitochondrial capacity. Nothing on our panel isolates it.

Sleep

Same time, every night. Dark, cool, nothing plugged in.

DARK, COOL, SAME TIME

Sleep

PRO

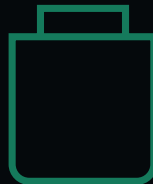

Same bedtime, same wake time, seven days a week. Room cool and completely dark. Last food three hours before bed. Phone out of the bedroom.

Room at 62 to 65°F. Grounding sheet. Mouth tape. Nothing electronic in the room. To the minute, not roughly.

| **Answers Q3, Q4.** Recovery is when gradients are rebuilt and membranes repaired. Sleep timing and regularity are logged daily.

Supplements

Dosed to your labs, not to a label. No commission on any of it.

DOSED TO YOUR LABS

Supplements

PRO

On waking

Cowboy Colostrum, 1 scoop in water.

With the morning glass

Spirulina powder (Nutrex Hawaii), 1 tablespoon. Quicksilver Methyl B-Complex, 1 pump. Quicksilver NAD+ Platinum, 1 pump.

With the meal

Pure Encapsulations O.N.E. Multivitamin, 1. Pure Encapsulations EPA/DHA Essentials, 2,000 mg EPA+DHA. Vitamin D3/K2 liquid, 5,000 IU, adjusted after labs. Creatine, 5 g. Dragon Herbs Super Adaptogen, 3. He Shou Wu, 3. Deer Antler Drops, 1 dropper, 21 days on 7 off. Cordyceps, 3. Duanwood Reishi, 3. Gaia Daytime HPA, 2. Gaia Turmeric Supreme, 1. Quicksilver Liposomal Glutathione, 1 pump. Life Extension Taurine, 2 g.

Pre-training

Cordyceps, 2 more. Creatine, 5 g more on heavy days.

Afternoon, empty stomach

Dragon Herbs Spring Dragon Longevity Tea. Vital Proteins Collagen, 20 g in the tea with lemon. Goji & Schizandra Drops, 1 dropper. Gaia Daytime HPA, 2.

Evening, two hours before bed

Chlorella powder (Sun Chlorella), 1 tablespoon, alone. Magnesium Glycinate, 400 mg. Glycine, 3 g. l-Theanine, 200 mg. Zinc 30, 1. Gaia Nighttime HPA, 2. Dragon Herbs Lights Out, nightly for two weeks then as needed.

Three mornings a week

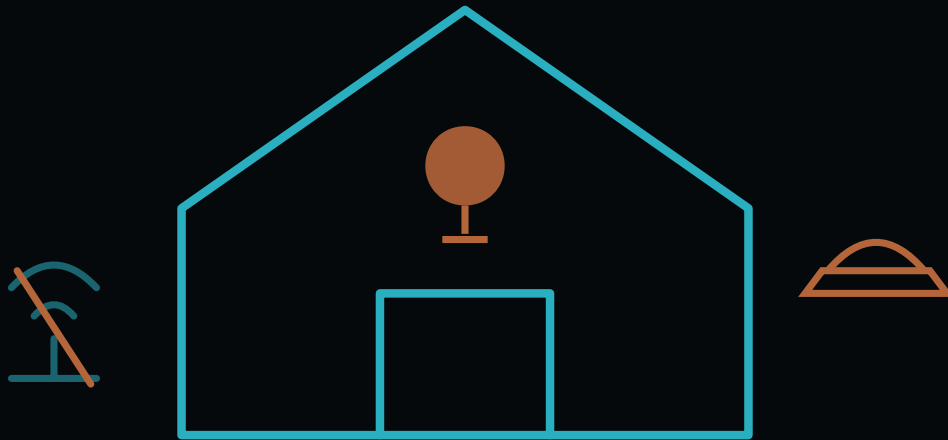

Dragon Herbs Tonic Alchemy, 1 scoop, replacing the multivitamin. BioPure Ultra Binder, 1 scoop, an hour away from everything.

This is the base stack, not the tired stack. If you are still depleted on this, the problem is sleep or overtraining, and the fix is less.

Answers Q2, Q4. Substrate for membranes and enzymes. Omega-3 Index, 25-OH vitamin D, RBC magnesium, B12 and ferritin are on the panel.

Equipment and sourcing

Glasses, bulbs, a router timer, water, and where to get each one.

RED LIGHT, ROUTER OFF, GLASSES ON

Equipment and sourcing

PRO

Dr. Pittman takes no commission on anything listed here. These are what he uses.

Evening glasses	Ra Optics Sunset (amber) or Night Shift (red). BLUblox Sleep+. TrueDark Twilight. They must block 460 to 490 nm. Ask for the transmission spectrum.
Screens	Iris (iristech.co) on every computer, Health mode after sunset. f.lux is the free alternative. BlockBlueLight or Ocushield film on monitors. BlockBlueLight filter on the TV.
Bulbs	Incandescent wherever you can find them. Otherwise BlockBlueLight or Bon Charge red bulbs for evening rooms.
Router	Mechanical outlet timer, off 10pm to 6am. About twelve dollars.
Grounding	Earthing.com or Hooga sheet for the bed, mat for the desk. Test your outlet with a three-dollar tester first.
Water	Crazy Water #4, Saratoga, Icelandic Glacial. APEC or iSpring under-sink RO at home. Baja Gold sea salt.
Sauna	Gym sauna for most. Sun Home or Almost Heaven barrel for a home unit. Traditional, not infrared.
Cold	Cold shower to start. Ice Barrel or a chest freezer conversion with a GFCI for a home plunge.
Testing	OmegaQuant Omega-3 Index kit, day 0 and day 90. Camry grip dynamometer.

Three phases

Stop the drain. Recharge. Build. Measured at both ends.

MEASURED AT BOTH ENDS

Three phases

PRO

Days 1 to 30	Full protocol from day one. Establish every baseline: Omega-3 Index, grip, VO2max, DEXA, CGM for two weeks, daily HRV.
Days 31 to 60	Progressive overload on every lift. First 36-hour fast in week six. Contrast therapy to three times a week.
Days 61 to 90	Peak load. CGM back on for the last two weeks. Day 90 draw, same lab, same hour.

10 / EVERY DAY

Daily checklist

This is what goes in the log. Under a minute.

☒	—	☒	—	☒	—
☒	—	☒	—	☐	—
☐	—	☐	—	☐	—

UNDER A MINUTE, EVERY DAY

Daily checklist

PRO

- ☐ Outside within 15 min of waking, 30+ min, barefoot
- ☐ Morning glass: water, Baja Gold, lemon
- ☐ Cold plunge 5 to 8 min
- ☐ Training block
- ☐ Meal inside 7am to 1pm
- ☐ Walk after meal
- ☐

Midday sun 20+ min

- ☐ Sunset outside
- ☐ Sauna, two rounds
- ☐ Red glasses from sunset, screens off
- ☐ Four liters of water
- ☐ Phone off, router off, bed at fixed time
- ☐ Logged

What this is, and is not

The Human Battery Project is an educational wellness program, not medical treatment. It does not diagnose or treat any condition and does not replace your physician.

Any laboratory result outside the reference range is referred to a physician. Every time.

If you take prescription medication, review the supplement list and any change to your eating window with your prescriber before starting. Never adjust a medication on your own because of anything in this document.

Stop and seek medical care for chest pain, fainting, shortness of breath at rest, or any new symptom that concerns you.

Never manipulate potassium or other electrolytes to try to change your body's charge. Balance and correction of a genuine deficiency only.

We do not promise outcomes. We measure at both ends and show you exactly what changed.
