

Brand Style

VERSION 3 · DAWN

The field is deep indigo, the hour before sunrise, not pure black. The copper wordmark sits on it unchanged. On indigo the copper reads as first light rather than polished metal.

Dawn

One amber moment per view. Amber is the most tempting colour here and the easiest to overuse.

Use it for one figure, one call to action or one rule per view. Everything else is indigo, ivory and copper.

Two surfaces

The app is dark. The portal, site and dashboards sit on surface-field with panels on surface-raised.

Documents are ivory. Program PDFs, the book, the Battery Kitchen and anything printed sit on surface-page.

Two grounds, two coppers

The brand copper fails body text on ivory at 3.45:1 against a 4.5:1 requirement. Documents use copper-deep for headings and copper-ink for text. The field is for covers, title pages, the site header and the mark.

The wordmark, and the trademark beside it

Squared geometric capitals, wide tracking, a polished copper gradient with a specular highlight.

Rules

- Use the supplied file only. Never recreate it in type.
- Show it on the field, surface-field, or surface-night on the book jacket only. Never on ivory, a photograph or copper.
- Clear space: space-6, 64px, or the cap height of HUMAN, whichever is larger, on all four sides.
- Never recolour it, add a glow, outline it, stretch it, set it in another face, or separate PROJECT from the wordmark.

The flat fallback, and the trademark

The gradient cannot survive one-colour print, embroidery, a favicon, an email signature, or anything under about 120px wide.

Use flat copper on the field, and flat copper-ink on ivory. A flat mark is correct. A muddy gradient is not.

The trademark

- Every appearance of the logo carries a trademark symbol, set small at the upper right of the wordmark, beside the end of HUMAN BATTERY.
- It is a separate element placed next to the logo. Never edit the logo file to add it.
- Its colour matches the mark: copper or copper-light on the field, copper-ink on ivory.
- In text, add it the first time The Human Battery Project™ appears in a document, page or email. Later mentions do not need it.
- Use the trademark symbol, not the registered symbol. Switch only once the registration is granted.

Placement is measured, not judged by eye. The cap height of HUMAN is 0.1837 of the image height, the right edge of HUMAN BATTERY is 0.9622 of the width and its top is 0.3619 of the height. All three assets share one 2172 x 724 canvas, so one set of numbers serves all of them.

One rule cannot currently be met. Clear space is space-6, 16.93mm, or the cap height, whichever is larger. The page bottom margin is 14mm, so a footer mark cannot satisfy it without repaginating every document. Footer placements run at 2.5mm and need a ruling.

The tokens

Documents are ivory. These are the values a PDF, the book or anything printed uses.

TOKEN	HEX
 surface-page	#FBF9F5
 surface-raised	#F4EFE4
 surface-field	#0E1424
 surface-night	#000000

 status-warn	#D9A441
 status-critical	#E0705E

Charts

- Up to three series only. Past three, fold into Other or use small multiples.
- Sequential data is one hue, light to dark. Diverging is copper against blue with a warm grey middle, never copper against green.
- Status colours are separate from series colours and always come with an icon and a word.

Three faces, three jobs

ROLE	FAMILY	RULES
Display	Michroma	Wordmark text and eyebrows only. Always tracked out, 0.18em wordmark, 0.30em eyebrow. Never below 11px, never running text.
Headings, labels, figures	Archivo	h1 34/40 700, h2 24/30 700, h3 17/24 600 +0.02em.
Reading text	Spectral	body 16/26, small 13/20. The book and program documents.

Uppercase labels carry at least 0.08em tracking. Headings use balanced wrapping. Reading measure stays near 65 characters.

This page is set in those three faces. Until September 2026 none of them was installed, so every document in the repository declared them and rendered in Georgia and Helvetica instead.

Spacing and corners

space-1 4px, space-2 8px, space-3 16px, space-4 24px, space-5 40px, space-6 64px, which is the page margin and the wordmark clear space.

radius-none 0px is the default because the mark is squared. radius-sm 4px for chips and badges.

radius-md 10px is the largest radius anywhere.

How it reads

- Third to fifth grade reading level. Every instruction says what to do and why.
- No em dashes. Use commas or periods.
- Credentials in marketing: Dr. Micah Pittman, UCSD cell biology degree, 25 years in health care. Not positioned around chiropractic.

Retired values

Any file still using one of these is stale. This list is read from `brand/tokens.json`, and `scripts/check_brand.py` fails a commit that reintroduces one.

OLD	REPLACE WITH
#05090C	carbon -> surface-field
#2AAFC0	teal -> copper-light, or chart-2 for data
#6E908C	steel -> ink-muted, or rule for borders
#ECF3F4	ice -> ink on the field
#218BBE	blue -> chart-2 for data, surface-raised for fills
#B6BDBC	silver -> ink-muted
#157A5C	green -> chart-3 for series, status-good for state
#B4653A	old copper -> the copper token for the ground
#13323F	navy-2 -> surface-raised
#0E2530	navy -> surface-raised
#0E557C	blue-lo -> dawn-deep, fills only
Newsreader	the reading face is Spectral
atom v4 mark	the copper wordmark
