

— THE —
HUMAN
BATTERY
— PROJECT —

BEGINNER

NINETY-DAY PROTOCOL

You are starting from a stopped engine. One thing a month. By day 90 you will be doing more than you thought possible and it will never have been hard on any single day.

Circadian protocol

BEGINNER

Everything in this program depends on this section. If you do nothing else in the first two weeks, do this.

Your body runs on a clock, and the clock is set by light. Morning light tells every cell what time it is. Darkness at night lets the repair cycle run. When the clock is right, food is handled correctly, hormones release on schedule, and sleep does its job. When the clock is wrong, nothing downstream works, no matter how well you eat or train.

The sequence, every day:

LIGHT → WATER → MOVEMENT → FOOD → MOVEMENT → LIGHT → DARKNESS

Go outside as soon as you wake up

What to do: Outside within 30 minutes of waking up. Fifteen minutes minimum. Sit in a chair if you need to. Face toward the sun with your eyes open. No sunglasses. Not through a window, not from the car. Outside. Do this before coffee, before food, before your phone. This is the most important fifteen minutes of your entire day.

Why: Your body has a clock inside it. The clock does not know what time it is until it sees the sun. When morning light hits your eyes, it tells every cell in your body that the day has started. That one signal sets up your energy, your hunger, your hormones and your sleep for the whole day. If you skip it, your body runs on the wrong time all day, like a clock that was never set.

Get sun on your skin in the afternoon

What to do: Fifteen minutes outside in the afternoon, somewhere between noon and 3pm. Short sleeves if the weather allows. Sit or walk, either is fine. If your skin is fair, start with ten minutes and build to fifteen. Never burn.

Why: Morning light sets the clock. Afternoon sun charges the battery. Sunlight on your skin makes vitamin D, which almost everyone is low on, and it releases a chemical that relaxes your blood vessels and lowers blood pressure. A little bit every day does more than a lot once a week. You are not trying to tan. You are trying to get the signal.

Watch the sun go down

What to do: Fifteen minutes outside as the sun is going down. Look toward the sunset, not straight at the sun. This is the third outdoor block of your day, and it is the one that fixes your sleep.

Why: The light at sunset is red and orange. That color tells your body the day is ending and it is time to start making melatonin, the hormone that makes you sleepy. Seeing the sunset is how your body knows to begin winding down. Skip it and your body does not get the message, and then you are wide awake at midnight wondering why.

Put on your glasses when the sun goes down

What to do: The moment the sun goes down and you come inside, put on your amber glasses. Wear them until you are in bed. Every screen you use at night gets a blue light filter: Iris or f.lux on the computer, night mode on your phone, and a blue-blocking film on the TV. Swap the bulb in your bedroom lamp for a warm or red one this week. Add the living room next month.

Why: After sunset, your body expects darkness. Light bulbs and screens give off a blue light that looks like daytime to your brain. Your brain sees it and stops making melatonin, and that is why you cannot fall asleep even when you are

tired. Amber or red glasses block the blue. So do warm bulbs and screen filters. It is not about the brightness. It is about the color.

Make the bedroom dark and quiet

What to do: Your phone sleeps in another room. Starting tonight. Charge it in the kitchen. If you use it as an alarm, buy a ten-dollar alarm clock. Cover any small lights in the room, like the glow on a charger or a TV. As dark as you can get it.

Why: Your body does its repair work while you sleep, and it can only do it in the dark. Even a small light, like a phone screen or a charger glow, can be enough to keep the repair from starting. The phone also keeps your brain on alert, waiting for a buzz. Out of the room means your body can finally switch off.

Stand barefoot on the ground

What to do: During your morning fifteen minutes outside, take your shoes and socks off and stand or sit with your bare feet on grass, dirt or sand. Same fifteen minutes. No extra time.

Why: The earth carries a natural electric charge. When your bare skin touches grass, soil or sand, your body connects to it. Shoes with rubber soles block that connection, and most people go weeks without ever touching the ground. We stack this with the morning light so it is one habit, not two. You are outside anyway. Take your shoes off.

Give your body hours with no food

What to do: Month one: nothing to eat for three hours before bed. That is the only rule. Month two: eat between 9am and 7pm, and close the window thirty minutes earlier every two weeks. By day 90 you are eating between 9am and 6pm, and you will not have noticed it happening.

Why: Every time you eat, your body has to stop what it is doing and deal with the food. If you eat from the minute you wake up until right before bed, your body never gets a break to do repairs. Hours without food, especially overnight, is when the cleanup happens. Late eating is the worst, because your body is trying to wind down and you just handed it a job.

The rule that matters most: light before food, every single day. Do not eat until you have been outside.

Water and minerals

The morning glass

Before coffee, before food, before anything: 16 to 24 oz of mineral water with a pinch of Baja Gold sea salt and 1 to 2 oz of pure organic lemon juice. Empty stomach. It is the first thing the body receives after light.

Through the day

Three liters. It will feel like a lot at first. Carry a bottle and refill it three times. Every bottle gets a pinch of Baja Gold, because water without minerals passes through and takes minerals with it. Most of it before your last meal.

What to drink

Crazy Water #4, Saratoga or Icelandic Glacial as bottled water. At home, reverse osmosis with Baja Gold added, a quarter teaspoon per liter. Baja Gold for cooking. Nothing else.

Movement

Month one

Nothing. Light, water and sleep only. You are building the clock first.

Month two

Walking: ten minutes after dinner every night. After two weeks, after lunch too. After four, after every meal.

Resistance, twice a week, ten minutes: sit-to-stand from a chair, wall push-ups, seated band rows, hip hinge with a broomstick. Three sets of what you can do. **Steps:** your current average plus a thousand.

Month three

Resistance, three days. Sit-to-stand becomes bodyweight squat. Wall push-up becomes incline push-up on a counter. Band row becomes inverted row under a table. Broomstick hinge becomes kettlebell deadlift. **Walking:** twenty to thirty minutes after dinner, some of it brisk enough that talking is hard.

No intervals before day 60, and only with physician clearance.

Food

Month one

No food rules except one: nothing three hours before bed. If you are eating fast food, you are eating fast food this month. We are building the clock first.

Month two: the window, and one food a week

Eating window 9am to 7pm, tightening thirty minutes on the evening side every two weeks. **No snacks.** Three meals. This one rule does more than any other.

Week 5: eggs every morning. **Week 6:** greens with lunch. **Week 7:** sardines or salmon three times a week. **Week 8:** sauerkraut or kimchi with dinner.

Month three: remove two things

Gluten and seed oils, starting week 9. That is the only elimination in this tier. Nightshades, grains and legumes stay in.

Protein

Work toward 1.6 grams per kilogram by day 90. Protein first at every meal.

The full approved food list, the daily non-negotiables and the cookbook are in the Dietary Guidelines document.

Heat and cold

Months one and two

Nothing.

Month three

The last thirty seconds of every shower, cold. That is the entire cold protocol. Sauna only with physician clearance, fifteen minutes twice a week if you have easy access.

Sleep

Same bedtime, same wake time, seven days a week. Room cool and completely dark. Last food three hours before bed. Phone out of the bedroom.

Pick a wake time and hold it. That is the only sleep rule in month one, and it is the one that makes everything else possible.

Supplements

Month one: three bottles

Life Extension Super Omega-3, 2,000 mg EPA+DHA. Your baseline is almost certainly low. Pure Encapsulations Vitamin D3/K2, 5,000 IU. Magnesium Glycinate, 300 mg in the evening.

Nothing else. Three bottles taken every day beats eight bottles abandoned in week three.

Month two, add

Creatine, 5 g morning. Gaia Daytime HPA, 2 morning.

Month three, add

Dragon Herbs Super Adaptogen, 2 morning. Spirulina and chlorella blend, 1 teaspoon morning, building to a tablespoon. Gaia Nighttime HPA, 2 evening. Dragon Herbs Lights Out if sleep is still the problem.

Days 61 to 90, if exhausted

Super Adaptogen, 3 morning. Daytime HPA, 2 morning and 2 afternoon. Cordyceps, 2 morning.

Equipment and sourcing

Dr. Pittman takes no commission on anything listed here. These are what he uses.

Evening glasses	Ra Optics Sunset (amber) or Night Shift (red). BLUblox Sleep+. TrueDark Twilight. They must block 460 to 490 nm. Ask for the transmission spectrum.
Screens	Iris (iristech.co) on every computer, Health mode after sunset. f.lux is the free alternative. BlockBlueLight or Ocushield film on monitors. BlockBlueLight filter on the TV.
Bulbs	Incandescent wherever you can find them. Otherwise BlockBlueLight or Bon Charge red bulbs for evening rooms.
Router	Mechanical outlet timer, off 10pm to 6am. About twelve dollars.
Grounding	Earthing.com or Hooga sheet for the bed, mat for the desk. Test your outlet with a three-dollar tester first.
Water	Crazy Water #4, Saratoga, Icelandic Glacial. APEC or iSpring under-sink RO at home. Baja Gold sea salt.
Sauna	Gym sauna for most. Sun Home or Almost Heaven barrel for a home unit. Traditional, not infrared.
Cold	Cold shower to start. Ice Barrel or a chest freezer conversion with a GFCI for a home plunge.
Testing	OmegaQuant Omega-3 Index kit, day 0 and day 90. Camry grip dynamometer.

Three phases

Days 1 to 30	Light and water. Fifteen minutes outside in the morning, fifteen in the afternoon, fifteen at sunset. Glasses on at sundown, screens filtered, phone out of the bedroom. The morning glass and three liters. A fixed wake time. That is everything, and it is more than it sounds.
Days 31 to 60	Movement and the window. Walk after dinner. 9am to 7pm window, no snacks. Two ten-minute resistance sessions. One new food a week.
Days 61 to 90	Load. Three resistance days. Longer walks. Gluten and seed oils out. Cold finish on the shower. Day 90 draw.

Daily checklist

This is what goes in the log. Under a minute.

- | | |
|--|---|
| ☐ Outside within 30 min of waking, 15 min, barefoot | Screens filtered |
| ☐ Morning glass | ☐ Three liters of water |
| ☐ Fifteen minutes of afternoon sun | ☐ Nothing three hours before bed |
| ☐ Fifteen minutes at sunset | ☐ Phone out of the bedroom |
| ☐ Glasses on when the sun goes down | ☐ Same wake time |
| ☐ | ☐ Logged |

The Human Battery Project is an educational wellness program, not medical treatment. It does not diagnose or treat any condition and does not replace your physician. Any laboratory result outside the reference range is referred to a physician. If you take prescription medication, review the supplement list with your prescriber before starting. Stop and seek medical care for chest pain, fainting, or any new symptom that concerns you.
