PRO

NINETY-DAY PROTOCOL

You are already doing all of it. This is the full stack, sequenced and measured.

Circadian protocol

PRO

Everything in this program depends on this section. If you do nothing else in the first two weeks, do this.

Your body runs on a clock, and the clock is set by light. Morning light tells every cell what time it is. Darkness at night lets the repair cycle run. When the clock is right, food is handled correctly, hormones release on schedule, and sleep does its job. When the clock is wrong, nothing downstream works, no matter how well you eat or train.

The sequence, every day:

LIGHT → WATER → MOVEMENT → FOOD → MOVEMENT → LIGHT → DARKNESS

Go outside as soon as you wake up

What to do: Outside within 15 minutes of waking, before anything else. Thirty minutes on a clear day, forty-five when it is cloudy. Face east, toward where the sun comes up. Barefoot on grass, dirt or sand the whole time. No sunglasses. No looking through a window. It has to be real outdoor light in your eyes.

Why: Your body has a clock inside it. The clock does not know what time it is until it sees the sun. When morning light hits your eyes, it tells every cell in your body that the day has started. That one signal sets up your energy, your hunger, your hormones and your sleep for the whole day. If you skip it, your body runs on the wrong time all day, like a clock that was never set.

Get sun on your skin in the afternoon

What to do: Twenty to forty minutes of sun on as much skin as you can, around noon. Sized to your skin. Never let yourself burn.

Why: Morning light sets the clock. Afternoon sun charges the battery. Sunlight on your skin makes vitamin D, which almost everyone is low on, and it releases a chemical that relaxes your blood vessels and lowers blood pressure. A little bit every day does more than a lot once a week. You are not trying to tan. You are trying to get the signal.

Watch the sun go down

What to do: Outside for the last twenty minutes of light, every day.

Why: The light at sunset is red and orange. That color tells your body the day is ending and it is time to start making melatonin, the hormone that makes you sleepy. Seeing the sunset is how your body knows to begin winding down. Skip it and your body does not get the message, and then you are wide awake at midnight wondering why.

Put on your glasses when the sun goes down

What to do: Red lenses from sunset, not amber. Every bulb you use after dark is incandescent or a red LED. Screens off after sunset. Candles are the correct evening light.

Why: After sunset, your body expects darkness. Light bulbs and screens give off a blue light that looks like daytime to your brain. Your brain sees it and stops making melatonin, and that is why you cannot fall asleep even when you are tired. Amber or red glasses block the blue. So do warm bulbs and screen filters. It is not about the brightness. It is about the color.

Make the bedroom dark and quiet

What to do: Phone off, not airplane mode. Router off at the breaker. Nothing plugged in within six feet of the bed. Grounding sheet. Blackout. Room at 62 to 65°F.

Why: Your body does its repair work while you sleep, and it can only do it in the dark. Even a small light, like a phone screen or a charger glow, can be enough to keep the repair from starting. The phone also keeps your brain on alert, waiting for a buzz. Out of the room means your body can finally switch off.

Stand barefoot on the ground

What to do: Thirty minutes barefoot on the earth every morning, stacked with the light block. Grounding sheet on the bed at night.

Why: The earth carries a natural electric charge. When your bare skin touches grass, soil or sand, your body connects to it. Shoes with rubber soles block that connection, and most people go weeks without ever touching the ground. We stack this with the morning light so it is one habit, not two. You are outside anyway. Take your shoes off.

Give your body hours with no food

What to do: Eating window 7am to 1pm. One 24-hour fast per week on a non-lifting day, water and minerals only. Optional 36-hour fast once a month.

Why: Every time you eat, your body has to stop what it is doing and deal with the food. If you eat from the minute you wake up until right before bed, your body never gets a break to do repairs. Hours without food, especially overnight, is when the cleanup happens. Late eating is the worst, because your body is trying to wind down and you just handed it a job.

The rule that matters most: light before food, every single day. Do not eat until you have been outside.

Water and minerals

The morning glass

Before coffee, before food, before anything: 16 to 24 oz of mineral water with a pinch of Baja Gold sea salt and 1 to 2 oz of pure organic lemon juice. Empty stomach. It is the first thing the body receives after light.

Through the day

Four liters minimum, five on sauna and training days. Every bottle gets a pinch of Baja Gold, because water without minerals passes through and takes minerals with it. Most of it before your last meal.

What to drink

Crazy Water #4, Saratoga or Icelandic Glacial as bottled water. At home, reverse osmosis with Baja Gold added, a quarter teaspoon per liter. Baja Gold for cooking. Nothing else.

Movement

Resistance, five days

Day A: weighted pistol squats, weighted pull-ups, weighted dips, Nordic curls. **Day B:** deadlift, handstand push-ups, weighted rows, farmer carries. **Day C:** front squat, ring muscle-ups, ring dips, single-leg RDL. **Day D:** A heavier. **Day E:** B heavier. Five sets of three to six on the main lifts.

Zone 2, four sessions of 60 to 90 minutes

Heart rate at 180 minus your age. Fasted. This is where mitochondria are built and it is non-negotiable.

Intervals, three sessions, never consecutive

Norwegian 4×4 twice a week: four minutes at 90 percent, three minutes easy, four rounds. One session of ten 30-second sprints with 90 seconds rest.

Walking

Fifteen minutes after every meal. Twelve thousand steps.

Grip

Dead hangs to failure daily. Farmer carries three times a week.

Food

Window: 7am to 1pm

One large meal or two. One 24-hour fast per week.

The meal

Two tins of sardines or 8 oz wild salmon, every day. Grass-fed beef, lamb or liver, 10 to 12 oz. Four pastured eggs. Two cups leafy greens, two cups cruciferous. A fermented vegetable. Extra virgin olive oil, grass-fed butter or tallow. Baja Gold.

Protein

2.2 grams per kilogram of bodyweight, every day, inside the window.

Out for 90 days

Gluten, all grains, all legumes, all nightshades, seed oils, sugar, alcohol, all dairy except butter and ghee. Nothing processed. Nothing in a package with more than one ingredient.

The full approved food list, the daily non-negotiables and the cookbook are in the Dietary Guidelines document.

Heat and cold

Cold, every morning after light

Five to eight minutes at 45°F or below. Then the day starts.

Sauna, every day

Two rounds of twenty minutes at 185 to 200°F. Rehydrate with Baja Gold water between rounds.

Contrast, three times a week

Twenty hot, four cold, three rounds.

Cold never within four hours after resistance training. Morning cold then a lift is fine. Lift then cold is not.

Sleep

Same bedtime, same wake time, seven days a week. Room cool and completely dark. Last food three hours before bed. Phone out of the bedroom.

Room at 62 to 65°F. Grounding sheet. Mouth tape. Nothing electronic in the room. To the minute, not roughly.

Supplements

On waking

Cowboy Colostrum, 1 scoop in water.

With the morning glass

Spirulina powder (Nutrex Hawaii), 1 tablespoon. Quicksilver Methyl B-Complex, 1 pump. Quicksilver NAD+ Platinum, 1 pump.

With the meal

Pure Encapsulations O.N.E. Multivitamin, 1. Pure Encapsulations EPA/DHA Essentials, 2,000 mg EPA+DHA. Vitamin D3/K2 liquid, 5,000 IU, adjusted after labs. Creatine, 5 g. Dragon Herbs Super Adaptogen, 3. He Shou Wu, 3. Deer Antler Drops, 1 dropper, 21 days on 7 off. Cordyceps, 3. Duanwood Reishi, 3. Gaia Daytime HPA, 2. Gaia Turmeric Supreme, 1. Quicksilver Liposomal Glutathione, 1 pump. Life Extension Taurine, 2 g.

Pre-training

Cordyceps, 2 more. Creatine, 5 g more on heavy days.

Afternoon, empty stomach

Dragon Herbs Spring Dragon Longevity Tea. Vital Proteins Collagen, 20 g in the tea with lemon. Goji & Schizandra Drops, 1 dropper. Gaia Daytime HPA, 2.

Evening, two hours before bed

Chlorella powder (Sun Chlorella), 1 tablespoon, alone. Magnesium Glycinate, 400 mg. Glycine, 3 g. l-Theanine, 200 mg. Zinc 30, 1. Gaia Nighttime HPA, 2. Dragon Herbs Lights Out, nightly for two weeks then as needed.

Three mornings a week

Dragon Herbs Tonic Alchemy, 1 scoop, replacing the multivitamin. BioPure Ultra Binder, 1 scoop, an hour away from everything.

This is the base stack, not the tired stack. If you are still depleted on this, the problem is sleep or overtraining, and the fix is less.

Equipment and sourcing

Dr. Pittman takes no commission on anything listed here. These are what he uses.

Evening glasses	Ra Optics Sunset (amber) or Night Shift (red). BLUblox Sleep+. TrueDark Twilight. They must block 460 to 490 nm. Ask for the transmission spectrum.
Screens	Iris (iristech.co) on every computer, Health mode after sunset. f.lux is the free alternative. BlockBlueLight or Ocushield film on monitors. BlockBlueLight filter on the TV.
Bulbs	Incandescent wherever you can find them. Otherwise BlockBlueLight or Bon Charge red bulbs for evening rooms.
Router	Mechanical outlet timer, off 10pm to 6am. About twelve dollars.
Grounding	Earthing.com or Hooga sheet for the bed, mat for the desk. Test your outlet with a three-dollar tester first.
Water	Crazy Water #4, Saratoga, Icelandic Glacial. APEC or iSpring under-sink RO at home. Baja Gold sea salt.
Sauna	Gym sauna for most. Sun Home or Almost Heaven barrel for a home unit. Traditional, not infrared.
Cold	Cold shower to start. Ice Barrel or a chest freezer conversion with a GFCI for a home plunge.
Testing	OmegaQuant Omega-3 Index kit, day 0 and day 90. Camry grip dynamometer.

Three phases

Days 1 to 30	Full protocol from day one. Establish every baseline: Omega-3 Index, grip, VO ₂ max, DEXA, CGM for two weeks, daily HRV.
Days 31 to 60	Progressive overload on every lift. First 36-hour fast in week six. Contrast therapy to three times a week.
Days 61 to 90	Peak load. CGM back on for the last two weeks. Day 90 draw, same lab, same hour.

Daily checklist

This is what goes in the log. Under a minute.

- | | |
|---|---|
| ☐ Outside within 15 min of waking, 30+ min, barefoot | Midday sun 20+ min |
| ☐ Morning glass: water, Baja Gold, lemon | ☐ Sunset outside |
| ☐ Cold plunge 5 to 8 min | ☐ Sauna, two rounds |
| ☐ Training block | ☐ Red glasses from sunset, screens off |
| ☐ Meal inside 7am to 1pm | ☐ Four liters of water |
| ☐ Walk after meal | ☐ Phone off, router off, bed at fixed time |
| ☐ | ☐ Logged |

The Human Battery Project is an educational wellness program, not medical treatment. It does not diagnose or treat any condition and does not replace your physician. Any laboratory result outside the reference range is referred to a physician. If you take prescription medication, review the supplement list with your prescriber before starting. Stop and seek medical care for chest pain, fainting, or any new symptom that concerns you.
